

RYAN HICKEY

Applied AI Engineer · Data Engineer · COO · Technical Operator

ryan@wolfstrategyllc.com · [linkedin.com/in/workwithryan](https://www.linkedin.com/in/workwithryan) · github.com/wolfpackdata · San Francisco Bay Area

PROFESSIONAL SUMMARY

Applied AI engineer, data scientist, software developer, and technology operator with 20+ years of coding experience and 17 years leading technology, analytics, and operational initiatives. Combines deep expertise in software architecture, Python development, SQL, cloud analytics, financial modeling, automation, and systems design with modern AI development workflows using Claude Code, OpenAI Codex, ChatGPT, and GitHub Copilot.

Known for designing and delivering production-ready software, internal tools, workflow automation, and decision-support systems through AI-accelerated development practices. COO and partner of an eight-figure e-commerce brand through its climb from \$300K to \$30M, and head of insights & analytics at an AI SaaS company where the quantitative platform he built became a \$20k-MRR product; financial modeling and forecasting run through every role since 2009, so solutions get designed with the P&L in mind. Now focused on AI engineering as its own discipline — building agentic systems and shipping public software.

CORE EXPERTISE

AI Engineering & Agent Development

Prompt Engineering · Claude Code · Claude Skills & Subagents · OpenAI Codex · ChatGPT · GitHub Copilot · Model Context Protocol (MCP) · AI Agent Design · Multi-Agent Orchestration · Agentic Development Environments · Rapid Prototyping

Data & Analytics Engineering

dbt · BigQuery · PostgreSQL · Looker & Looker Studio · Dagster · ETL & Analytics Pipelines · Warehouse Modeling · Cloud Analytics

Product & Operations Leadership

Technical Project Leadership · Scope Definition & SOW Process · Notion API & Databases · Cross-Functional Team Management · Vendor & Partner Management · Strategic Planning · Operational Scaling · Shopify Plus

Software Engineering & Architecture

Python · SQL · VBA & Advanced Excel · API-First Application Development · Custom Web Applications · Systems Design · Data Architecture · GitHub Actions & GitFlow · CI/CD · Technical Documentation

Quantitative Modeling & Forecasting

Financial Modeling · Forecasting · Scenario & Simulation Modeling · Pricing Optimization · Revenue Management · Unit Economics · P&L Modeling

PROFESSIONAL EXPERIENCE

HEAD OF INSIGHTS & ANALYTICS — TROMML INC.

2023–2026

- ▶ Built the company's first quantitative insights platform, transforming operational data into software tools and AI-assisted workflows, generating \$20k in MRR through SaaS subscription access to the platform.
- ▶ Designed scalable data architecture and warehouse models using dbt, SQL, Python, BigQuery, Looker, Dagster and modern development practices.
- ▶ Built AI-assisted analysis tools and workflow automation systems supporting product, engineering, and customer teams.
- ▶ Developed ETL and analytics pipelines for enterprise clients that transformed transaction, inventory, and ops data from multiple systems into executive-ready visualizations, simulation tools, and decision-support models.

FOUNDER & PRINCIPAL CONSULTANT — WOLFPACK DATA & STRATEGY LLC

2023–PRESENT

- ▶ Founded and currently lead a technology consulting practice focused on AI-assisted software development, workflow automation, analytics engineering, and business systems architecture.
- ▶ Design and build custom web applications, internal tools, data platforms, and AI-enabled workflows around how each client's business actually works, delivered against a scope of work iterated on together.

- ▶ Built and run a bespoke AI development command center: a Python engine wiring Claude Code, OpenAI Codex, GitHub, Notion, and BigQuery into one supervised pipeline — every agent action planned against a task, logged, and reviewable — and leave behind reusable AI skills and agents that keep creating value after launch.
- ▶ Run each engagement in an isolated, confidential commercial AI environment with a Data Processing Agreement in place — never a shared client workspace.
- ▶ Deliver live dashboards and financial models that show what is working and prove the ROI, with plans, decisions, and documentation kept in Notion so projects stay fully visible to the client.
- ▶ Advise and train organizations on AI adoption, workflow automation, software modernization, and technology strategy, including 1:1 technical coaching for engineers already building with AI.

CHIEF OPERATING OFFICER & PARTNER — AUTO SOSS INC. / SHOCK SURPLUS

2015–2025

- ▶ Served as primary systems architect and quantitative leader during growth from \$300K to \$30M in annual revenue.
- ▶ Wrote the company's proprietary pricing and inventory algorithms in Python and SQL — the systems behind how the catalog was priced and how inventory was bought and held.
- ▶ Ran the company's Shopify Plus storefront for 10+ years: commerce platform, dynamic pricing, automated inventory, and fulfillment systems on a custom tech stack (Matrixify, Rithum, GCP, SendGrid).
- ▶ Built the financial planning, forecasting, and operational automation systems the business ran on.
- ▶ Led cross-functional internal teams and external vendor partners of up to 20 people across operations, engineering, analytics, eCommerce, and systems implementation initiatives.

DIRECTOR OF MARKETING SCIENCE — IN4MATION INSIGHTS

2009–2012

- ▶ Led quantitative consulting engagements for major retailers, manufacturers, and enterprise clients.
- ▶ Built software solutions and analytical applications using SAS, SQL, VBA, R, Python, MATLAB, SPSS, Tableau, and advanced Excel.
- ▶ Specialized in pricing optimization, forecasting, revenue management, and data-driven business strategy.

FOUNDER & PRODUCER — RML CREATIVE LLC

2023–PRESENT

- ▶ Run a creative technology business at the intersection of music and software — the entity behind SetMaster 3, and the studio workflow and automation systems built around it, integrating custom software, hardware, and analog signal chains.
- ▶ Produce, compose, and perform original electronic music, and deliver music technology education, under an LLC run alongside the consulting practice.

FOUNDER & OWNER — NICEMAN MUSIC STUDIO LLC

2009–2016

- ▶ Designed and built a flat-response acoustic recording environment to commercial specification and ran it as a working studio with paying clients.
- ▶ Produced, engineered, and released an original music catalog that was published and licensed for use.

SELECTED AI APPLICATIONS & SYSTEMS

E-commerce Intelligence Platform — Tromml Inc.

Built and shipped an e-commerce intelligence platform alongside a senior AI Engineer/CTO, using AI-accelerated development throughout. Python, dbt, PostgreSQL, BigQuery, and Looker Studio behind an interface that lets business users query complex operational data through natural-language interaction instead of filing analyst requests. Reached \$20k MRR as a subscription product.

The \$30M Data Backbone — Auto SOSS Inc. / Shock Surplus

The pricing, inventory, forecasting, and operational automation systems that carried an eight-figure e-commerce brand from \$300K to \$30M in annual revenue. Written in Python and SQL, designed and owned end to end while serving as COO — the engineering and the P&L were the same job.

Notion–GitHub AI Dev Command Center

A bespoke command center for AI-accelerated development: a skills-based planning, project-management, and AI-supervision suite built on a Python engine that wires Claude Code, OpenAI Codex, GitHub, Notion, and BigQuery into a single pipeline.

Every agent action is planned against a tracked task, logged, and reviewable — transparent human + agent software development at blistering speed, with an audit trail rather than a black box.

SetMaster 3

An offline, cross-platform desktop-class web application — TypeScript and React over a Python analysis engine, shipping double-clickable installers for Windows and macOS with no terminal required. Parses a proprietary XML catalog format strictly read-only and reconciles it against third-party API exports through years of accumulated name-normalization and fuzzy-matching heuristics, with compound filtering and a structured editor over the result. Now at v3.0.4 after four issue-driven fix rounds; it replaces a Python/Excel-VBA prototype used professionally for years.

pdpd

An AI e-commerce frontend tool that fixes, generates, A/B tests, and version-controls product description page catalogs running to millions of pages. Python and FastAPI with a per-instance Postgres cluster and cloud-ready storage, model, and secrets seams. In alpha, built from a full written specification.

BQL Analytics Provisioner

Provisions a standardized, layered BigQuery analytics environment — raw, staging, clean, analysis — and wires Looker Studio on top, in minutes instead of a week of console clicks. Python CLI, built so the client owns the Google Cloud project and can revoke consultant access at any time.

Time-Trackify

An agent that reconstructs a workday from the evidence it already left behind — local repositories, GitHub, Notion, calendar, and mail — matches each session to a real project, and pushes billable entries to Clockify with provenance attached. Python, local-first, privacy-scoped by design.

AI Coaching Program & Curriculum

An applied AI enablement program built on a five-tier ability model and three role tracks, from professionals who have never used AI to engineers already shipping with it. Covers prompting that transfers context, memory and project configuration, verification habits that make AI output safe to sign, and confidentiality judgment fitted to a student's industry and employer policy — the last of which makes it usable in law, healthcare, finance, education, and HR.

EDUCATION

Cornell University (2007) B.S. Operations Research & Industrial Engineering

Ten years of classical piano study with a university professor, inside 36 years at the instrument, 23 years paid to perform, and 20+ years of studio production and audio engineering. Sound engineering and composition learned through mentors, online programs, and practice. A long-running second discipline in real-time systems, signal processing, and creative tooling. Music and audio are passions that I will study and explore for the rest of my life.

CURRENT TECHNICAL FOCUS (2026)

- ▶ Production AI systems engineering, agentic workflow architecture, and LLM orchestration across Anthropic Claude, OpenAI GPT-4o, Codex, and emerging model ecosystems
- ▶ API-first AI application development, tool use/function calling, multi-agent coordination patterns, and Model Context Protocol (MCP) integration
- ▶ Claude Certified Architect – Foundations (CCA-F) certification, target completion Q4 2026
